

Aquafax, Luton - Bedfordshire

Flixborough-Eco-Technologies Limited facilitated the installation of our Solar PV Array at our head office in Luton, Bedfordshire in October 2015.

The supply, installation & commissioning process was very smooth. They have a very good team supporting them from their office staff, external contactors (scaffolding team) through to their electricians who were very professional & courteous whilst on site.

We very much appreciated their support in getting the system fully uploaded onto the Ofgem Portal & in helping us fill out the subsequent forms in order to complete our application.

Giles & his team were in regular contact with updates which helped us enormously in the planning & implementation of this project.

We are very pleased with the outcome of this venture & hope that we have a long, sunny summer to reap the benefits of our 284 solar panels.
