

Case Study – M Portess, Brigg

Outline: System Size: 1 x 4kW Panels: FuturaSun 250 Inverter: Afore 3600

Ms Portess was looking to install solar panels after coming across Flixborough Eco Technologies at BNI. After our initial meeting, one of our surveyors went round to survey her property. Within a few weeks, her panels has been installed and were generating.

The house is a south west elevation which works well with Solar as it offsets her running costs by reaching a large amount of sun. A 4kW system was installed which equates to 16 panels altogether. The panels chosen were polycrystalline which means they are the more navy blue as opposed to monocrystalline which are black. This scheme was completed in October 2015 and she has never looked back. After being so thrilled with the whole process, we were referred to her son, who also had his Monocrystalline panels installed within weeks.

The system is designed from information gathered at the survey and will look something like the below pictures.

Ms M Portess, 4kW Poly

Mr L Portess, 4kW Mono
