

Solar PV Case Study – AMS No-Dig

Outline: System Size: 29.9kW Panels: FuturaSun Inverters: Afore 30kW

From a recently successful scheme at their neighbour’s site, AMS No-Dig approached Flixborough Eco Technologies to discuss renewable energy and how we could help cut running costs. AMS No-Dig is the largest privately owned horizontal directional drilling and guided auger boring contractor in the UK.

Giles visited the Operations Director of the AMS Group to discuss which technologies could help future proof the business. After completing a site survey, Giles presented AMS No-Dig with a proposal for a Solar PV Installation, which all involved were satisfied that the project could begin. At all times throughout the installation, AMS No-Dig were informed of the on goings to ensure that the company would be disturbed as little as possible.
